

DANIEL TOWERS

Director, Presales & Solutions Consulting

978-985-9980 · d.towers@yahoo.com · linkedin.com/in/danieltowers · Westford, MA

PROFESSIONAL SUMMARY

Presales and solutions consulting professional with 20+ years turning fragmented, complex data into systems that drive revenue. Known for translating complex technical capabilities into business outcomes that resonate with both executive buyers and technical evaluators — bridging the gap between what a platform does and why it matters commercially. Played a lead technical role in the NXTDRIVE platform launch, guiding enterprise clients through evaluation to adoption and contributing to \$8M+ in combined platform and media revenue across the first 7 clients. Supported marquee deals at Redpoint Global including CVS (\$17M), GoDaddy (\$6M), Gap, and Ralph Lauren across CDP, identity resolution, and real-time personalization. Fluent at the intersection of data and activation — technical enough to architect the solution, commercial enough to close it. Currently building Activemark, a SaaS platform born from a gap identified across dozens of enterprise activation engagements. Comfortable operating across ambiguous, fast-moving environments, partnering closely with product, sales, and go-to-market teams.

EXPERIENCE

Founder & Builder | Activemark LLC | Westford, MA 2026 – Present

Identified a consistent gap across enterprise activation engagements - misaligned audience files and misconfigured briefs that silently erode campaign performance before launch. Conceived and directed the development of Activemark: a live multi-tenant SaaS platform that validates audience data against campaign briefs before activation, catching structural gaps that cost marketers downstream revenue. Also directing two additional platform initiatives: a professional trust and networking tool (near release) and a stakeholder analysis and planning tool for go-forward strategy.

- Directed product architecture and development priorities across validation logic, suppression management, geospatial targeting, and NLP-driven brief-to-audience fit scoring - translating operational pain points from the field into a structured, market-ready product. Architected the decision layer between programmatic processing and AI-driven evaluation across multiple product initiatives, determining where scale and consistency win, and where AI judgment is the right tool for scoring, matching, and data interpretation. A framework with direct application to agentic and MCP-driven system design.

Director, Solutions Consulting | Vericast / RRD / Iridio Jan 2023 – Jan 2026

Three-year engagement across two roles spanning a platform launch, a platform sunset, and the founding of a new marketing agency within the same organizational family.

Director, Solutions Consulting · Jan 2023 - Jan 2025: Led presales through the full NXTDRIVE platform launch - building the presales function from scratch for the second platform generation.

Director, Strategic Marketing Consulting · Jan 2025 – Jan 2026: Founding member of the Strategic Consulting Group for Iridio, RRD's newly launched marketing agency — consulting clients and internal teams on marketing strategy, data utilization, and martech platform opportunities.

- Audited data processes, customer journeys, and marketing performance for DTC retail clients; delivered strategic roadmaps for program enhancement across real-time data exchange, personalization, and journey optimization.
- Evaluated segmentation strategies and recommended outreach adjustments to maximize impact — including channel mix changes and spend reallocation to more closely align with business goals.
- Assessed partnership opportunities across identity resolution, personalization, and data enrichment vendors including FullContact, Bloomreach, and Data Axle.
- Leveraged predictive modeling and lookalike audience extensions built on first-party data to drive targeting precision — translating client data assets into activation-ready segments that improved campaign performance and justified platform ROI.
- Built the demo environment, defined the solutioning motion, and developed sales messaging and ROI storytelling for the platform launch.
- Hired and provided structured mentorship for solutions consulting resources, while creating a feedback loop channeling prospect insights to product and R&D — contributing directly to Snowflake and Sisense integration priorities.
- Conceived and drove the Customer Command Center (3C) - the client-facing analytics layer for NXTDRIVE covering campaign performance, contact insights, audience quality scoring, and data health metrics. After NXTDRIVE sunset, the concept and design became the core UI and data story for the Iridio platform.

Principal Solutions Consultant | Algonomy Dec 2021 – Jan 2023

Sole US presales resource for a global AI-driven retail personalization and CDP platform, competing directly against Bloomreach, Dynamic Yield, Algolia, and similar composable personalization players.

- Aligned technical and go-to-market strategy with the CRO, overhauling product-market messaging and driving the launch of a new real-time CDP segmentation platform.
- Contributed to closing the first new US recommendation system sale in over two years.

Solutions Consultant, Presales Lead | QuickPivot / Vericast Jan 2020 – Dec 2021

- Partnered with sales and product to launch the platform that would become NXTDRIVE.

Principal Solutions Consultant | Redpoint Global | Wellesley, MA Nov 2015 – Jan 2020

Presales leader supporting new business across retail, healthcare, and channel partnerships. Presented two complementary platforms. A data pipeline and identity resolution engine plus a real-time campaign orchestration platform. Sold independently and as an integrated CDP solution.

- Supported landmark enterprise deals: CVS (\$17M), GoDaddy (\$6M), Gap, and Ralph Lauren — typical contract values \$500K–\$1M.
- Led a Starbucks enterprise POC: designed the approach to unify membership, sales, app, and loyalty data across 32M records; surfaced previously undetected behavioral patterns in gift card usage consistent with recurring corporate purchasing — a finding with direct implications for segmentation strategy and B2B targeting.
- Partnered with LiveRamp to position an integrated identity graph solution; worked directly with a client to redesign their adtech process for first-visit web personalization.
- Defined, developed, and delivered custom demos and POCs across MS SQL, MongoDB, and Redshift; coordinated RFI/RFP responses across complex multi-stakeholder evaluations.

Director, Consulting Americas | SDL / Alterian Nov 2013 – Oct 2015

- Managed a \$13.5M revenue practice across 12 direct clients and 22 MSP partners covering North and South America — with a two-person US delivery team. Maintained partner renewals and prepaid commitments through a period of significant structural pressure; authored a comprehensive practice assessment identifying gaps in resourcing, product complexity, and channel support capacity.

Principal Sales Engineer | Pitney Bowes Software Oct 2011 – Oct 2013

- Presented real-time decisioning, predictive analytics, and marketing automation solutions across North and South America; closed 5 new accounts. Demo2Win and Holden trained.

VP, Professional Services & Presales | SmartFOCUS | Waltham, MA May 2007 – Sep 2011

One of three US-based senior leaders for a UK-headquartered martech company. Sold a high-performance columnar database engine alongside a campaign management platform via a partner-driven GTM model.

- Served as the primary technical voice across North American partner accounts — leading onboarding, coaching, and troubleshooting, and building strategic roadmaps with clients in travel, retail, and insurance.

Senior Director, Marketing Technology | Epsilon Data Management | Wakefield, MA 1990 – 2004

Fourteen-year tenure across five progressive roles at one of the US's foremost marketing services companies. Career arc: mainframe systems analyst → Oracle DBA → database team leader → senior technology director.

- Led 12-person team consolidating 80 regional Multiple Sclerosis Society chapter databases into a single national file — one of the earliest large-scale nonprofit identity resolution efforts in the US.
- Built B2B entity standardization and account hierarchy framework for AirTouch Cellular — matching logic, normalization rules, and subsidiary-to-HQ hierarchies across 100,000+ accounts before commercial solutions existed.
- Managed four Oracle DBAs; led adoption of emerging martech platforms including Crystal Reports, Business Objects, Alterian, Unica, and Netezza.
